

# MOUNT VERNON PARK

## Lawrence, Massachusetts

Cuoco & Cormier Engineering Associates worked with the City of Lawrence to revitalize Mount Vernon Park. Mount Vernon Park was an aging athletic facility that could not meet local needs. C&C worked with the City to convene a series of public forums to gain local input and to develop concept plans that allowed the community to maximize the potential of the site.

The final design involved the construction of four tournament quality baseball fields with stadium lighting, a multi-purpose community building, a press box, a playground and new site utilities. The new park layout also reduced local safety and traffic concerns by more than doubling the amount of on site parking. The re-construction effort has enabled the City to fully utilize the site and increase its value to the local community.

Cuoco & Cormier prepared the concept, design and permitting plans for the project. In addition, C&C developed the construction plans and project specifications for this \$3,000,000 effort. Cuoco & Cormier also served as the construction supervisor for the year long re-construction effort.
