

KEENE STATE COLLEGE

Keene, New Hampshire

Construction Survey Layout of the Science Center

Detailed construction layout of interior baselines tied to existing building column lines.

The purpose of these baselines was for all interior layout for the proposed addition to the existing Science Center building. Additionally, Cuoco & Cormier provided detailed layout of steps and landings, electrical and cable conduit and seating in a proposed arched and terraced lecture hall. This included computations from complicated architectural drawings provided by the client. Elevation benchmarks were also established for use by other tradesmen during construction.
